EXPERIENCE

JULIUS Connected 2 Grow | Miami, FL

March 2026 – Present

Marketing and nearshore digital growth agency providing outsourced marketing teams and technology-driven solutions to US-based clients.

FINANCIAL OPERATIONS ANALYST

- Led month-end close processes using QuickBooks, ensuring accurate financial reporting, payroll reconciliation, and timely delivery of financial statements.
- Analyzed client and employee-level profitability, building internal models to track margins, pricing, and unit economics across operations.
- Designed and automated financial workflows (staffing calculator, pricing tools, reporting systems) using AI and no-code tools, reducing manual effort and improving decision speed.
- Built internal tools to support payroll operations, cost allocation, and client billing, improving operational efficiency and reducing errors.
- Identified and implemented process improvements across finance and payroll operations, optimizing workflows and scaling operational capacity.
- Developed AI-assisted solutions (prompting, workflows, semi-automations) to enhance reporting, analysis, and internal decision-making processes.
- Collaborated directly with operations, finance, and leadership teams to translate financial data into actionable insights and automation opportunities.

Schneider Electric Hub | Monterrey, México

March 2025 – July 2025

Global leader in energy management and automation, supporting large-scale industrial and infrastructure operations worldwide.

DATA FINANCE INTERN

- Automated recurring financial reporting workflows using Tableau, Power Automate, and structured data pipelines, reducing manual workload by 20% and accelerating reporting cycles by 2–3 days.
- Built data models and dashboards to track operational and financial KPIs, enabling faster analysis and decision-making across finance teams.
- Consolidated and structured datasets from 6+ internal sources, covering \$100M+ USD equivalent in operational and financial activity to support efficiency and cost analysis.
- Designed and deployed interactive dashboards tracking 20+ KPIs, used weekly by 15–20 finance and operations stakeholders across multiple business units.
- Contributed to operational efficiency analysis that helped identify cost optimization opportunities of 3–5% in selected processes.
- Standardized reporting logic and KPI definitions, reducing data inconsistencies by an estimated 25% across recurring reports.
- Delivered ad-hoc financial analysis supporting short-term planning and internal reviews for multi-million dollar operational budgets.

The Home Depot México | Monterrey, México

August 2024 – March 2025

Largest home improvement retailer in Mexico, operating a nationwide store network with complex inventory and loss-prevention challenges.

ASSET PROTECTION ANALYST INTERN

- Analyzed shrinkage, loss, and inventory data across 120+ stores, representing \$1B+ MXN in annual sales exposure, to identify high-risk categories and loss drivers.
- Built and maintained Excel and Power BI dashboards used in monthly executive and regional reviews by asset protection and operations leaders.
- Supported loss-prevention initiatives that contributed to a 12% improvement in shrinkage indicators, reducing losses in key product categories.
- Processed and validated hundreds of thousands of transaction-level records per month using Artus, Python, and SQL to track store-level KPIs.
- Performed trend, segmentation, and outlier analysis to flag top 10–15% highest-risk stores, enabling focused intervention strategies.
- Supported monitoring frameworks that helped maintain shrinkage within target thresholds across multiple regions.
- Collaborated with regional and corporate teams to translate analytics into action plans impacting dozens of stores simultaneously.

PROJECTS

AI-Powered Staffing & Pricing Calculator

- Built a financial tool to calculate real employee costs, client pricing, and margins across different countries and compensation structures.
- Designed automated logic to estimate payroll burden, operational costs, and target pricing, improving visibility into unit economics and profitability.
- Integrated AI-assisted features to suggest optimal pricing strategies based on cost structure and margin targets.

Automated Financial Reporting Workflow (n8n + GPT)

- Built an end-to-end automation using n8n and LLMs to transform raw financial data into client-ready monthly reports.
- Implemented data cleaning, metric calculations, anomaly detection, and AI-generated insights to reduce manual reporting effort.
- Generated executive summaries, risk alerts, and actionable recommendations for business owners using structured financial inputs.
- Designed scalable workflows integrating Google Sheets, AI models, and automated outputs (email / documents).

EDUCATION & CERTIFICATIONS

- **Bachelor's degree in Finance**
